

UO.NET application using configuration files do not work on UniVerse 10.3.0.

Abstract

This document describes the procedures needed to overcome issues using configuration files with uodotnet.dll.

Content

UniVerse 10.3.0 UO.NET was modified to share the same code base as UO.NET4CF Compact Framework(CF) code stream. The UO.NET4CF development environment excludes the use of configuration files (app.config or web.config). The configuration file exclusion now affects the standard UO.NET development environment.

Temporary Solution

Hard code configuration parameters into your dot net code.

U2 engineering is working on a new release of 10.3 Clients CD.
