The patch notes included with UniData don't display the topics

Beginning at UniData 7.2 we now create the patch notes using the Microsoft compiled html format. These files have a .chm file extension. This Tech Note explains how to configure your PC to display the Help topics.

After opening a .chm file the topics are not displayed and Action canceled is shown.

The behavior occurs after having installed Microsoft Security Update 896358.

To make the Help topics visible:

- Use Windows Explorer to locate the file
 Right-click on the file name
 Select Properties
 Select Unblock then Apply

readme72.chm	Properties	? ×
