**Alert : U2 Web Development Environment server version 4.4.2 may shut down on its own after 13 days**

Once the U2 Web Development Environment (U2 Web DE) server version 4.4.2 has been running for a period of 13 days, the server may shut down on its own.

This behavior is due to some changes performed in the RBO Server at version 4.4.2.  It can be prevented by setting a configurable parameter in the rgwresp.ini file.

Edit the rgwresp.ini file (located in the $RBHOME/rgw.conf) and in the `[Default]` section, add the following line:

```
schedlicense=0
```

After you add this line in the  rgwresp.ini file, you will need to restart the RBO server.
